

Automotive Collision Repair

Career Program at Danville Area Community College
Financial Aid eligible degree program

The automotive collision repair concentration focuses on developing the technical skills needed to restore automobiles after they have sustained damage. Emphasis is placed on problem-solving, understanding automotive body materials, and installation techniques.

Program Specific Courses Include:

- Fundamentals of Collision Repair
- Collision Repair Electrical Analysis
- Nonstructural Analysis/ Damage Repair
- Refinishing
- Collision Repair Mechanical Analysis
- Structured Analysis/Damage Repair
- Custom Refinishing Techniques
- MIG Welding

Job/Employment Information:

An auto body technician's job is to fix the damage by straightening bent frames, removing dents, and replacing crumpled parts. Most technicians work with cars and small trucks, although some work on other vehicles, such as buses and tractor trailers. In large shops, auto body technicians may specialize in one type of repair, such as frame straightening, refinishing, painting, or door and fender repairing. Some specialize in installing glass in automobiles and other vehicles.

An experienced auto body technician with supervisory ability might advance to shop supervisor. Some repairers open their own shops. Others might become automobile damage appraisers for insurance companies.

Where Can I find a Job? Auto body technicians work in auto body repair shops, auto dealerships, and auto body paint shops.

Expected Salary: Some Auto Body Technicians are paid on an hourly basis, while others work on an incentive basis. Under the incentive method, repairers are paid a predetermined amount for each task. Earnings depend on how much work they are assigned and how fast they can get it done.
